CEO's review

2017 – Success in the company's key areas

In 2017, DT continued strong growth and we achieved an excellent result. The global X-ray imaging market grew favourably, and we succeeded very well in a competitive market. Our result surpassed expectations, we gained new customers and did well in projects. Our turnover increased 18% to about EUR 89 million. Our turnover exceeded our advance estimate, as a result of which our operating profit was EUR 20 million, 22% of our turnover. The company's excellent result was also reflected in a strong cash flow, and our net cash reserves at the end of the year were EUR 21 million. Our success in almost all key areas ensured the continuation of growth and an excellent result after an exceptional year of growth in 2016.

Our product and service solutions and delivery capacity corresponded to the demand of the target markets and both our business units succeeded. In the first half of the year, growth at our Security and Industrial Business Unit (SBU) began to slow down from the peak in demand that had begun in 2016. SBU sales, however, increased significantly in the final quarter of the year, which spurred the unit's turnover on to annual growth of 4%, to stand at about EUR 58 million. Sales at our Medical Business Unit (MBU) increased much

more strongly than the market in the first three quarters and fell slightly in the final quarter. On an annual level, the MBU's turnover increased by 58% to EUR 31 million.

The markets in which we operate have grown steadily for several consecutive years, and it looks like the same rate of growth will continue. The annual growth rate for X-ray imaging equipment in the security sector has been about 7%, and in the industrial sector 5%. We believe that the growth in the security and industrial market will continue to be good, and that critical infrastructure, vehicles and the industrial market segments in particular will grow. According to our estimates, growth in the global medical X-ray imaging market will continue at the previous level. Its average growth rate has been about 5% per year, and in the medical computed tomography segment (CT) 3-5% per year.

“Our result exceeded expectations”

We reached significant milestones in the development of our business"

Geographically, market growth has been strongest in Asia and particularly China. The engines for growth in the medical imaging market are an ageing population and an improvement in health care in developing countries. The security market has grown as a result of increased political instability and terror attacks. Our solutions are used to prevent security threats not only at airports but also increasingly in other critical infrastructure where a large number of people move or congregate, such as at metro and train stations, ports, sporting events, concerts, hotels and offices. The growth drivers of the industrial segments, on the other hand, are quality, efficiency- and cost requirements. Component- and process quality assurance and the sorting of materials using X-ray technology are very topical.

Our market share increased slightly, and we estimate it to be 17% in both our business units. We succeeded well at the customer interface, and during the year we won the trust of 30 new customers. We currently have 240 active customers. Our customer relationships are long, and customer satisfaction has

also remained at a high level for several consecutive years.

We proceeded along a road dictated by our strategy, and during the year we reached several significant milestones in the development of our business. We unveiled the world's first standard X-ray detector module tileable on all four

sides for the most demanding medical computed tomography applications (CT). We also revamped our standard product portfolio in the industrial segment, and unveiled renewed X-Scan P, X-Scan H and X-Scan F-series for product security and quality inspection, material sorting and process control applications. Of these, the X-Scan F-series particularly designed for the needs of the recycling, forest and food industries was enthusiastically received by the market.

Other significant events in 2017 were the expansion of our Beijing factory, and the start of development projects for enterprise resource planning (ERP), product data management (PDM) and production data collection (PDC) systems. Our sites in Finland and China were also certified in accordance with the ISO 9000:2015 and ISO 14001:2015 standards. The environmental certificate of our new China factory is a sign of our constant aim of building our business responsibly and with respect for the environment.

Our work guides not only our profitability but also our commitment to ethical operating principles.

From the point of view of the success of our business, sustainability in all that we do is absolutely essential - it is a question of our relationship to our customers, personnel, investors, subcontractors, and the society and the environment around us. Our vision, mission, strategy and values are the cornerstones of our responsible business. Our international customers also require our operations to be guided by sustainability. For us, sustainability means openness, honesty, reliability and delivering results towards all our stakeholders. We view sustainable business as a continuing journey towards better well-being for all.

The expertise, motivation and commitment of our personnel are important to us, from a perspective of both personal and company development. We invested in the skills development and well-being of our personnel through several different development projects at all our sites. The largest individual project was the company-wide key competence mapping and construction of career paths. As a result of excellent productivity development, the number of our personnel decreased slightly over the year at our Chinese factory. At the end of the year, we employed 405 people working at our sites in Finland, China and the USA.

2017 improved opportunities to develop our business further. The financial position of our company is good, and we have both

the will and expertise to serve our customers better. We constantly take a critical view of our operations and development. We have a strong belief in our ability to produce added value for our customers, owners and personnel in 2018 and in the coming years.

I would like to thank our customers, owners and partners for their faith in us and for their support in 2017. The DT team performed beyond expectations, thank you for your great commitment. Our employees are professionals, who work with all their heart and enthusiasm - it is a privilege to work with you. Thank you all!

Detection Technology Plc

We are succeeding by working professionally"

Events and releases 2017

2017

18 MAY
DT created greater production capacity and flexibility with factory expansion and investments in advanced manufacturing technology in its recently established factory in Beijing.

15 JUNE
DT celebrated a cumulative shipment milestone. The company shipped the 2.5-millionth X-ray imaging solution for a next generation security CT system from its Beijing factory.

26 JUNE
DT featured its latest advancements in modular linear detector arrays like the X-Scan F, X-Scan M and X-Scan P series at the Digital Imaging 2017 conference in Mashantucket, Connecticut.

26 NOVEMBER
DT showcased the standard X-Tile detector module and its latest innovations on customized solutions for medical X-ray imaging at the RSNA 2017 show in Chicago.

4 JANUARY
DT boosted brand protection in the global food and clothing industries by introducing the digital X-Scan P product family. The series comes with the most accurate material separation capability and doubled scanning speed.

26 JANUARY
DT took the X-ray image quality of non-destructive testing systems (NDT) to new heights by launching the X-Scan H series providing best-in-class performance. The superior image quality is gained by optimized photodiode and electronics designs, and careful material selection.

20 JUNE
DT enabled maximum exploitation of raw materials by introducing the revamped X-Scan F series. This product family of high-resolution X-ray line cameras is designed for accurate and fast-paced quality inspection, and the grading and sorting of raw materials.

9 NOVEMBER
DT set a new industry standard with the world's first off-the-shelf, tileable CT detector module named X-Tile. The 4-sided buttable X-Tile meets the most stringent performance requirements of the highest tier volumetric computed tomography (CT) systems.

19 DECEMBER
DT was granted ISO 9001:2015 and ISO 14001:2015 certification for its sites in China and Finland. Lloyd's Register Quality Assurance Ltd audited the sites for both ISO 2015 standards without any non-conformities.

Our businesses

We offer off-the-shelf and customized X-ray imaging solutions for original equipment manufacturers and system integrators.

Our solutions range from photodiodes to optimized detector subsystems with ASICs, electronics, mechanics and software.

Our solutions meet the performance and reliability requirements of the most stringent applications, such as high-end CT systems. Furthermore, our products are built on a modular, scalable and easily customizable architecture.

We know that tiny details done right make a big difference, and that's why we are always pushing the edge of design for a better quality. When it comes to people's health and safety, only reliable and robust solutions are acceptable.

MEDICAL APPLICATIONS

- Computed Tomography (CT)
 - Mammography
 - Bone densitometry
 - Digital radiography
 - Dental X-ray imaging

SECURITY APPLICATIONS

- Carry-on and checked-in baggage screening
- Parcel and mail screening
- Cargo, container and vehicle screening
- Person screening

INDUSTRIAL APPLICATIONS

- Food, tire and pharmaceutical inspection
- Material sorting in the agriculture, forest, mining and recycling industries
- High-energy NDT and CT solutions for the aerospace, automotive, defense, renewable energy, oil and gas industries
- Process control

Being the most trusted partner imaging the unknown

Strategy

Our goal is to be the leader in computed tomography and line-scan X-ray detectors and solutions, and a significant player in other technologies where we see good business opportunities.

Our business model enables growth as we focus on our core competences: technology development, design, critical processes, final assembly and testing. This business model is asset-light and allows flexibility in the production and delivery of the products.

The cornerstones of our strategy are a focus on X-ray technology, customer and equipment specific tailoring, investments in research and product development and geographical reach.

Sustainability

With our technology, we create foresight capabilities quicker to discover and prevent threats. Our solutions contribute to the daily improvement of people's health and safety. We are the most trusted partner for imaging the unknown, and we take responsibility for the impact we make on the society and environment.

Our work is driven by performance as well as commitment to ethics and integrity. At Detection Technology, we believe that sustainability is fundamental to the success of our business. Our vision, mission, values and ethical business practices are the foundation of our responsible operations. For us being responsible means openness, honesty and reliability towards all stakeholders.

We care for our customers, employees, investors, partners and society, and aim to reduce our impact on the environment. We see sustainability as a continuous journey shaping our joint future for the common good.

Respecting our personnel

Motivated and committed personnel are a key asset for our business. We want to have a reputation as an employer that care for its employees and provide equal opportunities. Each of our employee has a unique role in building our future business as a talented individual and a trusted team member.

We offer equal opportunities for each employee to do work that truly matters, and to be proud of their own contribution. For our future business growth, it is crucial to provide compelling job roles and tasks, competitive pay and benefits, professional development paths, and a diverse, collaborative and humane workplace.

We pay close attention to the safety, health and well-being of our valuable personnel. We believe that a good work environment, recognition of outstanding performance, engagement and support for work-life balance, help us to drive innovation and achieve long-term success.

Human and labour rights

We at Detection Technology support and respect the United Nation's Universal Declaration of Human Rights. We also agree with the Ten Principles of UN Global Compact, six principles of which are related to human and employment rights. We observe the work-related rights defined by the International La-

bor Organization (ILO). We do not accept the use of forced labour or child labour in any form.

Sustainable supply chain

Suppliers play a crucial role in our value chain. We aim to have close and open relationships with our key suppliers and to create an ecosystem that strengthens the competitiveness of both parties, boosts innovation, and enables sustainable operations.

We carefully select our partners. The process starts long before any deals have been closed or components delivered. All our partners must meet our business and sustainability targets, and commit to continuous improvement. Our supplier requirements address quality, product-specific requirements, environmental management, occupational health and safety, social responsibility, and legal compliance. Detection Technology ensures that key suppliers comply with the requirements using performance indicators and auditing. We only do business with approved partners.

Detection Technology does not source raw materials and minerals directly, and expects that its supplier use only sustainably-produced raw materials. We are committed to supporting responsible sourcing of conflict minerals. We have adopted a conflict minerals policy, as part of the company's supply chain policy.

Minimizing our impact on the environment

We at Detection Technology, as a company and individuals, are committed to minimizing our impact on the environment caused by our products and operations. We work continuously to improve our environmental performance and efficiency.

We aim to supply environmentally-sound solutions enabling our customers to develop their businesses sustainably. We innovate and make investments in operating more sustainably, reducing our carbon footprint, better managing waste and air emissions, and reducing water and energy consumption.

ISO 14001-certified operations are the starting point for building environmentally-friendly products and global operations. Our Beijing operations were granted environmental certification in 2017, and our Finnish operations have been certified since 2006.

We globally monitor the environmental requirements for products, and national regulations related to our operations. Detection Technology observes and applies the requirements of the RoHS (The Restriction of Hazardous Substances Directive) and European Union regulation REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) directives in designs.

Detection Technology

Financial statements and Board of Directors' report

2017

Board of Directors' report

Financial year 2017 in brief

2017 was a year of strong growth and profitability. Detection Technology succeeded in a competitive market, grew significantly and its result exceeded expectations. The global X-ray imaging market grew steadily, and the company's product and service solutions and delivery capacity corresponded well to market demand.

The net sales of Detection Technology grew by 18% to EUR 89 million. The company's growth was a result of strong sales in the medical business unit (MBU) in the first three quarters, and significant growth in sales in the Security and Industrial Business Unit (SBU) in the final quarter of the year. MBU's net sales grew much more quickly than the market at 56% to EUR 31 million. On an annual level, SBU's net sales increased by 4% to EUR 58 million.

The company's business performed better than advance estimates. The operating profit of approximately EUR 20 million for the whole year and the operating profit percentage of 22% were the result not only of growth in sales and successful projects but also efficient operations. Fixed costs were lower than estimated. Research and development costs were 8% of net sales as a result of larger sales, successful projects and the timing of projects.

According to the company's estimates, its market share grew moderately and, to the company's understanding, was approximately 17% in both business units. The company also succeeded well at the customer interface, and during the year won the trust of 30 new customers.

During the financial period, Detection Technology continued its business development in accordance with its strategy. The company unveiled the world's first standard X-ray detector module tileable on all four sides for the most demanding medical computed tomography applications. The company also revamped the standard product portfolio of its industrial segment. Of these, the X-Scan F-series particularly designed for the needs of the recycling, forest and food industries was well received by the market. In 2017, other significant events were the expansion of the Beijing factory and the start of information system development projects. The company's sites in Finland and China were also certified in accordance with the ISO 9000:2015 and ISO 14001:2015 standards.

Net sales and financial result development

Net sales grew by 17.9% to EUR 89.0 million (75.5). The net sales of the Security and Industrial Business Unit (SBU) grew by 3.8% to EUR 57.9 million (55.8). The net sales of the Medical Business Unit (MBU) were EUR 31.1 million (19.8), which is 57.5% more than in the the previous year. SBU's share of total net sales was 65.0% and MBU's 35.0%.

Geographically, Asia was the largest market area with a 63.4% (71.8%) share in 2017. Europe's share of net sales was 12.1% (13.5%) and Americas' 24.5% (14.8%). The top five customers accounted for 59.5% (69.0%) of net sales in 2017.

January-December 2017 operating profit (EBIT) was EUR 19.9 million (14.8), 22.3% of net sales (19.6%). Financial items totaled EUR -0.5 million (-0.7). January-December income taxes were EUR -4.2 million (-3.2). Profit for the review period was EUR 15.2 million (10.9). Earnings per share were EUR 1.09 (0.81) (EUR 1.13 before the impact of the targeted share issue carried out in December).

Key figures of financial performance

	Group 2017	Group 2016	Group 2015	Parent Company 2017	Parent Company 2016	Parent Company 2015

Board of Directors and management

Heikki Allonen, Petri Niemi, Henrik Roos, Ari Saarenmaa and Andreas Tallberg were elected by the Annual General Meeting (AGM) to the Board of Directors at the meeting held on 23 March 2017. The Board elected Andreas Tallberg to chair the Board.

An extraordinary general meeting held on 20 September 2017 decided to increase the number of Board members to six, and elected Pasi Koota and Hannu Syrjälä as new members. Board member Ari Saarenmaa relinquished his duties on the Board. Andreas Tallberg continued as Chairman of the Board.

The Board of Directors has appointed Remuneration and Auditing Committees from amongst its number. From 23 March until 20 September 2017, the Remuneration Committee comprised Andreas Tallberg, Henrik Roos and Petri Niemi. The Remuneration Committee appointed Andreas Tallberg to chair the committee. On 20 September 2017, the Board of Directors appointed Andreas Tallberg, Henrik Roos, Petri Niemi and Hannu Syrjälä to the committee. Andreas Tallberg continued as chair of the Remuneration Committee. From 23 March until 20 September 2017, Heikki Allonen and Ari Saarenmaa belonged to the Auditing Committee. Heikki Allonen was elected chair of the Auditing Committee. On 20 September 2017, a new Auditing Committee was appointed comprising Heikki Allonen and Pasi Koota. Heikki Allonen continued as chair of the Audit Committee.

Hannu Martola has served as President and CEO. The company's auditor has been Ernst & Young Ltd with Juha Hilmola APA (Authorised Public Accountant) as the auditor in charge.

Report on the Corporate Governance

A report on the company's Corporate Governance (CG) has been given for the financial year 2017. The report can be found on the company's website.

Annual General Meeting

Detection Technology Plc's Annual General Meeting was held on 23 March 2017. The meeting handled and decided upon the following matters in addition to those referred to in the Articles of Association:

1) The decision was made to authorize the company's Board of Directors to acquire the company's own shares. This authority covers 675,000 shares, and is valid until the conclusion of the following Annual General Meeting, but no later than 30 June 2018. At the end of the review period, the authority to acquire the shares was completely unused.

2) The Board of Directors was authorized to decide on the issue of 1,345,000 new shares in the company. This authority is valid until the conclusion of the following Annual General Meeting, but no later than 30 June 2018. During the financial period, this authority to issue shares was used to issue shares for the share-based incentive program of company management. A total of 474,820 shares were issued within the framework of this program. At the end of the review period, 870,180 shares had not yet been issued under the authorization.

Shares and shareholders

At the end of the review period, the number of shareholders totaled 2,241. Approximately 65% of shares were owned by the 10 largest shareholders. On 21 June 2017, AC Invest Seven BV, a wholly-owned subsidiary of Ahlström Capital Oy (AC) bought all the Detection Technology Plc shares owned by Oy G. W. Sohlberg Ab (GWS), equating to about 39% of company shares. As a result of the deal, Ahlström Capital became the company's largest shareholder. The nominee-registered foreign holding of shares in the company was about 13.1% at the end of the review period.

Detection Technology's average share price from January to December 2017 was EUR 17.21. The highest share price in 2017 was EUR 22.50 and the lowest EUR 13.20. At the end of December, the closing price was EUR 17.98 and the company had a market capitalization of EUR 250 million. The number of shares traded between 2 January and 29 December was 7.44 million, which is 53.5% of the total number of shares. This number includes the share transaction between GWS and AC.

On 21 June 2017, the company received a notification from Ahlström Capital Oy of a considerable change in ownership and voting rights. According to the notification, as a result of the share transaction that took place on 21 June 2017, the ownership and voting rights in Detection Technology Plc exceeded 30% of all ownership and voting rights in the company, as referred to in Chapter 9 Section 7 of the Security Market Act. The notification stated that it was just for information purposes, and that the notifying party had no flagging obligation because the company is listed on the First North stock exchange.

On 21 June 2017, the company received a notification from Oy G.W. Sohlberg Ab of a considerable change in ownership voting rights. According to the notification, the ownership and voting rights of GWS had decreased to zero.

On 7 December 2017, the Board of Directors of Detection Technology Plc decided to issue 474,820 new shares in a targeted share issue for individuals entitled to the share incentives based on the authorization granted by the Annual General Meeting held on 27 March 2017. The number of shares outstanding following the share issue and at the end of the review period was 13,900,595.

Detection Technology has one share series and all shares have equal voting rights. The company's shares are listed on the Nasdaq First North Finland under the ticker symbol DETEC.

Shareholding of the management on 31 December 2017

	Shares	%
Members of the Board	26,098	0.19%
CEO	322,875	2.32%
Other members of the management team	220,906	1.59%

In addition to the above-mentioned shareholdings, at the end of the review period Oy Nissala Ab, a corporation controlled by the company's Chair of the Board Andreas Tallberg, owned 17,362 of the company's shares, and a corporation controlled by President and CEO Hannu Martola, Expedir Oy, owned 35,000 shares.

Share-based incentive programs

The company established share-based incentive programs for the President and CEO in 2008 and for key personnel in 2010. In these programs, shares can be offered for subscription to beneficiaries in three steps. The first step started in December 2016, the second in December 2017 and the third will start in December 2018, if the beneficiary is in an employment relationship with the company and fulfils other terms of the programs.

The Board of Directors accepts the share issue annually by 9 December with an authorization given by the Annual General Meeting. According to these share-based incentive programs, shares offered and allocated are issued without compensation. At the end of the review period, their maximum remaining number was 474,835. During the financial year, within the share-based incentive programs a total of 474,820 new shares were issued. The shares began being traded on 11 December 2017.

Risks and uncertainties

The management did not identify any fundamental changes to Detection Technology's risks and uncertainties in 2017. The company's most significant short-term risks are associated with uncertainties in the international economies and operating in the emerging markets.

Other risks are related to price competition, a significant share of net sales generated from the top five customers, APAC countries' large share of sales, product quality, SOP (startup of production) of new products, the updating of information systems, customer liquidity, exchange rate fluctuations, an overall rise in costs especially in China, the adequacy and competence of personnel and organizational efficiency.

The company aims to mitigate these risks with normal control and precautionary measures. The Group has not hedged foreign exchange risks. Group loans are not covered by interest rate hedging instruments, and consequently possible interest rate changes can impact the company results. The Group has taken measures to protect against material and immaterial damage by insuring its operations sufficiently.

Products that Group companies manufacture are sensitive X-ray detectors and related quality standards are rigorous. It is possible that, from time to time and despite on-going quality and assurance mechanisms, the quality of the products does not fully meet customer requirements thereby causing additional quality costs. There are several quality assurance and testing methodologies used in production, which are regarded as adequate by corporate management to make sure that, under normal conditions, products meet the requirements. Group companies in China and Finland have obtained ISO 9001:2015 and 14001:2015 certification for their key processes.

Through normal control and precautionary measures, the Company management aims to reduce the impact of risks affecting the company's operational continuity.

The environment

At Detection Technology, environmental responsibility means offering customers environmentally-friendly solutions and reducing the harmful environmental impact of the company's own operations. The company aims to actively anticipate and reduce the amount of environmental impact caused by its operations in all the company's key processes.

In the review period, the Group reduced its carbon footprint by, among other things, paying particular attention to reducing waste, optimizing the size of its product packaging, minimizing the use of packaging material and recycling. In product development, planning rules (DfE) were further developed taking into account environmental perspectives and objectives.

The key processes of Finnish and Chinese operations were also certified in accordance with the ISO 14001:2015 standard. No significant environmental damage came to the company's notice.

Events after financial year ended

During the 2018 financial year, business has continued without abnormal events.

Business outlook

Detection Technology estimates that the global security X-ray equipment market grew by about 7% during the review period, which is in line with the forecasts by market research institutes. Homeland Security Research Corporation (HSRC) estimated the compound annual growth rate (CAGR) of the market to be 6.7% in the period 2017-2021. According to HSRC, growth is a consequence of internationally increasing security risks. HSRC also assessed the growth in the X-ray equipment market, declaring that the rate of renewal of old equipment will accelerate. HSRC has not identified any noteworthy competing technologies for the screening needs of the security market, and considers the price quality relationship for X-ray imaging equipment to be excellent. (Source: HSRC May 2017 edition, X-ray baggage, cargo, people, container & vehicle screening market 2017-2021).

Detection Technology estimates that the annual growth rate in the industrial X-ray imaging equipment market will be approximately 5%. The company expects that the growth in the security and industrial market will continue to be good, and that critical infrastructure, vehicles and the industrial market segment in particular will grow. The European Civil Aviation Conference Standard 3 (ECAC3) that enters into force in 2020 will increase demand for computed tomography (CT) equipment at European airports.

According to industry estimates, the average global medical X-ray imaging market growth will be around 5% per annum. Detection Technology estimates that the medical computed tomography market grew in 2017 by a rate of 3-5% per annum. Market growth was strongest in Asia and demand also developed positively in North America. The company estimates that the global medical X-ray imaging market will develop positively.

Outlook for 2018

In 2018, the company expects sales to increase slightly in security and industrial applications. In medical applications, the company expects sales to increase in the first half of 2018 and to decrease in the second half when one of the company's key customers discontinues the use of DT products in the manufacture of its equipment. Price competition will intensify in all the company's markets. The company will continue to develop its business by gaining new customers and projects, and considers that the growth prospects for both its business units are good in the long term.

Detection Technology's medium-term outlook remains unchanged. Detection Technology aims to increase sales by at least 15% per annum and to achieve an operating margin at or above 15% in the medium term.

Dividend distribution policy

In accordance with a decision by the Board of Directors, the company aims regularly to distribute funds to shareholders every year, by paying dividends or refunding capital. The amount of funds for distribution and the time of payment are affected by, among other things, the company and Group result, its financial position, the need for capital and other possible factors. The aim is to distribute to shareholders 30-60% of the Group's annual earnings (earnings per share) before non-recurring items.

Board of Directors' profit distribution proposal

The distributable funds of the parent company Detection Technology Plc are EUR 28,782,655.66, of which EUR 3,611,311.82 represents the net profit for the financial year. The company's distributable funds are EUR 6,329,780.44. Since the end of the financial year, there have not been significant changes in the company's financial situation, nor does the solvency test referred to in Chapter 12, Section 2 of the Limited Companies Act affect the amount of distributable funds.

The Board of Directors proposes to the Annual General Meeting to be held on 27 March 2018 that, based on the balance sheet adopted for 2017, a capital repayment of EUR 0.35 per share be paid. The number of shares giving entitlement to a dividend is 13,900,595, which means that the total amount of dividend would be EUR 4,865,208.25.

Accounting principles for consolidated financial statements

Copies of Detection Technology Plc consolidated financial statement can be obtained from the company's offices in Oulu and Espoo.

Principles for consolidated financial statements

Consolidated financial statements of Detection Technology Group have been drawn up by using past equity method.

Intercompany transactions, account receivables and account payables as well as group internal shareholdings have been eliminated from consolidated financial statements. The income statements of subsidiaries have been converted to euro by using monthly average exchange rate for the financial period, and balance sheets have been converted by using the official rates at the end of the financial period. Differences arising from the currency conversion as well as the translation of foreign subsidiaries' share capital are included in retained earnings.

Cash flow statements for DT Group and Detection Technology Plc have been prepared in compliance with the cash flow reporting model recommended by Finnish Accounting Board (KILA).

Auditor's report

(Translation of the Finnish original)

To the Annual General Meeting of Detection Technology Plc.

Report on the Audit of Financial Statements

Opinion

We have audited the financial statements of Detection Technology Plc. (business identity code 0878389-8) for the year ended 31 December, 2017. The financial statements comprise the balance sheets, the income statements, cash flow statements and notes for the group as well as for the parent company.

In our opinion, the financial statements give a true and fair view of the group's and the company's financial performance and financial position in accordance with the laws and regulations governing the preparation of financial statements in Finland and comply with statutory requirements.

Basis for Opinion

We conducted our audit in accordance with good auditing practice in Finland. Our responsibilities under good auditing practice are further described in the Auditor's Responsibilities for the Audit of Financial Statements section of our report. We are independent of the parent company and of the group companies in accordance with the ethical requirements that are applicable in Finland and are relevant to our audit, and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Responsibilities of the Board of Directors and the Managing Director for the Financial Statements

The Board of Directors and the Managing Director are responsible for the preparation of financial statements that give a true and fair view in accordance with the laws and regulations governing the preparation of financial statements in Finland and comply with statutory requirements. The Board of Directors and the Managing Director are also responsible for such internal control as they determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors and the Managing Director are responsible for assessing the parent company's and the group's ability to continue as going concern, disclosing, as applicable, matters relating to going concern and using the going concern basis of accounting. The financial statements are prepared using the going concern basis of accounting unless there is an intention to liquidate the parent company or the group or cease operations, or there is no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of Financial Statements

Our objectives are to obtain reasonable assurance on whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with good auditing practice will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

As part of an audit in accordance with good auditing practice, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the parent company's or the group's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of the Board of Directors' and the Managing Director's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the parent company's or the group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events so that the financial statements give a true and fair view.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Other reporting requirements

Other information

The Board of Directors and the Managing Director are responsible for the other information. The other information comprises the report of the Board of Directors and the information included in the Annual Report, but does not include the financial statements and our auditor's report thereon.

Our opinion on the financial statements does not cover the other information.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. Our responsibility also includes considering whether the report of the Board of Directors has been prepared in accordance with the applicable laws and regulations.

In our opinion, the information in the report of the Board of Directors is consistent with the information in the financial statements and the report of the Board of Directors has been prepared in accordance with the applicable laws and regulations.

If, based on the work we have performed, we conclude that there is a material misstatement of the report of the Board of Directors, we are required to report that fact. We have nothing to report in this regard.
